Mbuti

doubt wholly dependent upon the villagers for all metal goods. So also with pottery, there being absolutely no knowledge of pottery manufacture among the Mbuti.

But it is significant that none of the authorities who cite the lack of these foodstuffs and metallurgical and ceramic skills among the Mbuti as an example of their economic dependence also cite the absence, among the Mbuti, of all knowledge of fire-making.[2] By the same reasoning this should make them dependent on the villagers for matches. The point is that mere lack does not constitute a necessary structural dependence, unless the lack is vital. We have to ask ourselves how *necessary* is this apparent economic dependence of the Mbuti upon the villagers.

It will be shown in the section on "The Forest World" that there is no question of any absolute dependence of the Mbuti upon the villagers for food, in that context, except insofar as luxuries ultimately tend to become necessities. It will be seen that in the forest their technology is sufficient to keep them supplied with all their basic needs. It will also be seen that metal is not a necessary part of their technology, any more than is pottery, or knowledge of fire-making.

In the village world, however, the Mbuti are completely dependent upon the villagers. Hunting and gathering in the neighborhood of any village are likely to be equally poor, and it would be difficult if not impossible for an Mbuti band to keep itself supplied with forest foodstuffs from a village headquarters. It would involve a half day's march, at least, to reach a suitable hunting area, and the physical effort alone would be enough to discourage even the most ardent hunter. But even more important is the fact that by living in the village the Mbuti would be out of touch with the forest, and would have no way of knowing the exact whereabouts of the game at any given time. Living in a hunting camp with the forest all around them, the Mbuti know only what is going on in their immediate vicinity. As the game moves

[2] Some Mbuti have learned to use matches, when available, and a few know of the fire drill from contact with their village neighbors. There is absolutely no indigenous method of making fire, however, and it is a point of no small importance to their social life that each household maintains its own hearth. Embers from this hearth are carried, usually by the woman, wrapped in fire-resistant leaves, during the hunt or while on the trail. At each new camp site, the family hearths are kindled from embers of the old family hearths, preserving a distinct sense of continuity. Whenever a communal hearth is required, as for the *molimo*, communal participation is accentuated by the compulsory contribution of embers from each family hearth. Whereas matches are rarely used, becoming quickly damp and useless, even if available, they are *never* used for kindling family or communal hearths, but only for such relatively mundane purposes as lighting a pipe or cigarette.
